

SkyNet™ Work Platform Netting

A revolutionary new work platform solution.

INCORD

Utilizing a specific net and tension strap design, SkyNet provides a unique and versatile work platform solution at height, particularly in locations where lifts and scaffolds are difficult to deploy and use. Already in use for years in Europe, InCord is proud to introduce this product to North America.

Increase Productivity and Efficiency

InCord SkyNet can provide your crew better mobility across the entire work area, without the need to reposition a lift or heavy support structure. Save time and money with increased speed and confidence, and eliminate constant repositioning of support systems.

Eliminate scaffolds, lifts and other heavy support equipment.

Installed & maintained by InCord-trained and certified crews.

Engineered for Safety & Versatility

SkyNet panels install between existing structural members and are supported by an interwoven grid of tension straps. The walking surface, made of High Tenacity Polypropylene knotless netting, is predictable, easily navigable, and won't become slippery.

The knotless construction of the netting prevents spread of damage in the event of a puncture or slice, and can be mended easily in the field.

- Saves time and expense
- Helps improve crew mobility and safety
- No cumbersome lifts or scaffolds
- High Tenacity Polypropylene knotless netting
- US-German cooperative engineering

Save time and labor and terminate the competition!

Professionally Installed and Maintained

SkyNet systems are installed, inspected and maintained by crews trained and certified by InCord and can provide their services across North America. Those crews are responsible for daily inspection and re-tensioning to ensure safety and the highest level of performance to keep your job running smoothly.

SkyNet Tension Strap

Minimal Sag

The netting reaches a maximum under-load sag of about twenty inches without further stretching of the material. By the end of the work day, the resting sag will be about twelve inches.

InCord N815 Blue HTPP Knotless Netting

InCord's N815 High Tenacity Polypropylene knotless netting in blue is used as the walking surface of SkyNet systems. The netting meets stringent criteria adopted from the European BGI 662 Standard for work platform netting. The blue color of the netting is highly visible against most backgrounds to provide confidence when using the system.
